LIGHTING FIXTURES AND CONTROLS TECHNICAL SHEET
ENERGY EFFICIENT COMMUNITIES

Prescriptive Program

The Pepco Energy Savings for Business Program offers incentives to install energy efficient lighting and lighting controls. To take advantage of these incentives, you must meet the following eligibility requirements:

1. Be a Pepco customer and business in the Maryland territory.
2. Have an electrical demand greater than 60kW or not participating in the Small Business Program.
3. Have an existing facility, as new construction is not eligible for this program.
4. Not be a temporary account or a vacant facility. These may be eligible for new construction/major renovation incentives.

Multifamily properties are eligible for lighting fixture and control incentives through the Prescriptive Program.

All projects require pre-approval.

You can also contact an approved Service Provider to discuss energy efficient equipment options. If you do not have a contractor or vendor in mind, please visit our website for a list of approved Service Providers.

All projects MUST receive pre-approval before purchasing equipment or beginning work. No amount of existing equipment being replaced may be removed or altered, and no amount of proposed equipment applied for may be purchased and/or installed prior to the issuance of a program pre-approval letter. Please review the program process and eligibility requirements on the program website as well as the Terms and Conditions. Please contact the program office with any questions.

The Lighting Fixtures and Controls Application is intended to be used for approximately one fixture replacements or efficiency upgrade retrofits in the Prescriptive Program.

How to Apply:

1. The Lighting Fixtures and Controls Workbook, which can be downloaded from the program website, must be completed and submitted to the program via the online Application Center. Pre-approval is required before proceeding. The following supporting information must also be included with the application:
   - Completed and customer-signed Terms and Conditions (T&Cs)
   - Manufacturer specification sheets for lamps, ballasts, drivers, and lighting controls
   - Current Design Lights Consortium (DLC), ENERGY STAR® or CEE website product qualification screenshots for products, in PDF format
   - No amount of existing equipment being replaced may be removed or altered, and no amount of proposed equipment applied for may be purchased and/or installed prior to the issuance of a program pre-approval letter.

2. The Program reviews submitted documentation, revises and/or requests additional documentation as necessary. A site inspection may be required as part of the pre-approval process.

3. The Program emails the project pre-approval to the customer and Service Provider.

4. If the scope of work has changed, the as-built workbook must be submitted. If your project increases the incentive amount by more than $2,500 or 10% of the reserved amount – whichever is greater – a separate application must be submitted for the variance prior to installation and will need to go through the application pre-approval process.

5. Once the installation of all proposed equipment is complete and the Pepco customer is satisfied with the equipment and installation, the Pepco customer must sign the program pre-approval letter. The customer-signed pre-approval letter must be uploaded to the online Application Center along with the final detailed invoice(s). The invoice should indicate total project cost, incentive amount, and balance of cost to be paid by customer.

6. The Program may require a post-installation inspection to verify compliance with program rules, accuracy of project documentation, and equipment operation.

7. The Program distributes the incentive check to the payee following final approval processing.

LIGHTING TECHNICAL REQUIREMENTS

GENERAL LED REQUIREMENTS

- Installations that are not for permanent use are not eligible for incentives (e.g. equipment that plugs into a receptacle).
- All ENERGY STAR luminaires must be hard-wired. Screw/plug-in lamps and recessed trim kits that screw in are ineligible for these measure codes. Incentives for lamps and recessed trim kits are available through Pepco’s Business Instant Discounts program.
- Equipment for each measure code must be selected within the specified “Category,” “General Application,” and “Primary Use” designations, as classified by the Design Lights Consortium (does not include ENERGY STAR measures).
- Wattage, Efficiency, and Lumen values for the proposed equipment are based on “Reported Data” and must be entered exactly as indicated on the Design Lights Consortium (DLC) Qualified Products List (QPL) and ENERGY STAR Qualified Products List.
- If LED linear lamps (TLEDs) are being installed and fewer lamps than what is currently installed are proposed for installation (i.e. installing a single lamp in a 2-lamp fixture), the luminaires must be permanently de-lamped and the TLEDs re-centered in luminaires through the use of UL/CSA-listed retrofit kits specifically made for this purpose.
- Private labeled equipment must be listed on the electronic lighting worksheet in the designated manufacturer and model columns as “Original (as listed on DLC/Private Labeled)” make and model numbers. Spec sheet submissions must include both the spec sheet for the original equipment and the spec sheet for the private labeled equipment with a signed letter attached by the original equipment manufacturer that validates the equipment is the same.
**GENERAL LED REQUIREMENTS (CONTINUED)**

- To qualify for a new fixture incentive, the existing luminaire must be removed and the new luminaire must be independently mounted in a manner that aligns with DLC Primary Use Designation for the luminaire type. Any application that does not align with DLC Primary Use Designation does not qualify for a new fixture incentive.
- A retrofit of existing equipment is any application that makes use of the existing housing luminaire as aligned by DLC Primary Use Designation. Retrofit equipment must be listed under DLC Primary Use Designation to qualify for a corresponding measure code.
- The program is intended for one-for-one replacement. If a lighting project exceeds the one-for-one cap, written authorization by the program is required prior to application submission.

**SPECIFIC LED REQUIREMENTS**

- Equipment must be listed on the ENERGY STAR® Qualified Products list to apply for ENERGY STAR measure codes (RL 171-173). All other lighting equipment must be listed on the DLC’s Qualified Product List.
- Type A and Type B LED linear replacement lamps (TLEDs) and LED mogul screw-based replacement for an HID lamp are not eligible for incentives. Only Type C equipment, as defined by the DLC, is eligible for incentives, as outlined in measure codes RL 181 and RL 182.
- Incentive for measure codes RL111 and RL 167 applies to contiguous linear feet of fixture installed, not for nominal linear feet. The measure code should only count the linear feet of a luminaire as measured from end to end, whether as a long contiguous unit or modular units connected to form a chain. Non-contiguous configurations of modular units can claim a per-foot incentive for the length of the assembly at its longest point from end to end of any given module.
- To qualify for high/low bay fixture incentives (RL 141 - RL 145), luminaires must be installed greater than or equal to 15 ft. above finished floor (AFF).

**GENERAL CONTROL REQUIREMENTS**

- To be eligible for lighting incentives, lighting controls are required to be installed as follows:
  - Daylight controls are required to be installed in spaces with a total of more than 150 watts of general lighting within toplight and/or sidelight daylight zones.
    - For sidelight daylight zones, fixtures within a distance of 1 x Height of Floor to Top of Window of the window must have daylight controls.
    - For example, if the top of the window is 8 feet from the floor, daylight controls need to be installed for all fixtures within 8 feet of the window.
    - For toplight daylight zones, fixtures within a distance of 0.7 x Ceiling Height of the skylight must have daylight controls.
    - For example, if the ceiling height is 9 feet, daylight controls need to be installed for all fixtures within 6.3 feet of the toplight.
    - The daylight zone shall extend longitudinally from the edge of the window or other opening up to 2 feet on either side.
    - For example, if a space has windows that are separated by a wall less than 2 feet wide, then all lighting fixtures within that space require daylighting controls.
  - Daylight controls are not required in: 1) spaces in health care facilities where patient care is directly provided and 2) dwelling units and sleeping units.
  - Occupancy/Vacancy controls are required to be installed in the following areas:
    - Classrooms/lecture/training rooms
    - Conference/meeting/multipurpose rooms
    - Copy/print rooms
    - Employee lunch and break rooms
    - Janitorial closets
    - Locker rooms
    - Lounges
    - Private offices
    - Restrooms
    - Storage rooms
    - Warehouses
    - Other spaces 300 sq. ft. or less that are enclosed by floor-to-ceiling height partitions
  - Lighting controls are not required in the following areas: 1) areas designated as security or emergency areas that are required to be continuously lit 2) interior exit stairways, interior exit ramps, and exit passageways 3) electrical rooms and 4) emergency egress lighting that is normally off.
  - Space types which fall under the requirements of needing both a daylight and occupancy/vacancy control (for example, an enclosed office containing windows with luminaires totaling more than 150W within the daylight zone) require a Dual daylight and occupancy/vacancy DOS control (LC 101-112) or a combination of separate daylight and occupancy/vacancy controls. For combinations of separate control types, only one control incentive will be paid.
  - Spaces with existing control types are not eligible for control incentives. Please indicate when entering your equipment if there are existing controls within a space.
  - Exterior luminaires require a functioning time clock or photocell to qualify for lighting incentives, but are not eligible for daylight control incentives. They are eligible for advanced network control and/or occupancy/vacancy control incentives.

| RL 171       | New LED ENERGY STAR fixture – 1,499 lm or less | 10                 | 70                       | $25/fixture | • ENERGY STAR fixtures must either be inseparable or be packaged with an ENERGY STAR qualifying lamp from the manufacturer.  
• Screw or plug-in based recessed trim kits are not eligible for this measure. |
| RL 172       | New LED ENERGY STAR fixture – 1,500 lm – 2,999 lm | 25                 | 70                       | $50/fixture | • ENERGY STAR fixtures must either be inseparable or be packaged with an ENERGY STAR qualifying lamp from the manufacturer.  
• Screw or plug-in based recessed trim kits are not eligible for this measure.  
• If the indicated lumen output is needed and the min. watts reduced cannot be obtained, please apply for RL 171. |
| RL 173       | New LED ENERGY STAR fixture – 3,000 lm or greater | 50                 | 70                       | $100/fixture | • ENERGY STAR fixtures must either be inseparable or be packaged with an ENERGY STAR qualifying lamp from the manufacturer.  
• Screw or plug-in based recessed trim kits are not eligible for this measure.  
• If the indicated lumen output is needed and the min. watts reduced cannot be obtained, please apply for RL 172. |

- **DLC Category** – Linear Replacement Lamps
- **DLC General Application** – Four-Foot Linear Replacement Lamps
- **DLC Primary Use** – Two-Foot Linear Replacement Lamps, U-Bend Replacement Lamps
- **DLC Primary Use** – 2-lamp External Driver Lamp-Style Retrofit Kits (UL Type C)
- **DLC General Application** – 3-lamp External Driver Lamp-Style Retrofit Kits (UL Type C)
- **DLC Primary Use** – 4-lamp External Driver Lamp-Style Retrofit Kits (UL Type C)

- Equipment must be listed on DLC NLC Qualified Products List.
- The DLC NLC Qualified Products List indicates the system requires a Local or Cloud Server to operate.
- Equipment must be listed on DLC NLC Qualified Products List.
- The DLC NLC Qualified Products List indicates the system requires a Local or Cloud Server to operate.
- Equipment must be listed on DLC NLC Qualified Products List.
- The DLC NLC Qualified Products List indicates the system requires a Local or Cloud Server to operate.
- Control must have the capability to control fixtures based on both occupancy and daylight.
- Customers must identify the quantity of fixtures located in a Daylight Zone on the Lighting Fixtures and Controls Worksheet (the same incentive will be paid for fixtures if they are not located in a Daylight Zone).
- Control must automatically turn fixtures on and off based on occupancy.
- Control must continuously dim fixtures located in a Daylight Zone (see General Control Requirements).
